

CMS Hospital Typology

Peer-Group Performance Report

Snapshot Date: 2026-07-01

This report summarizes the CMS Hospital Typology pipeline output.
3,115 U.S. acute-care hospitals are grouped into 7 structural peer clusters
based on bed size, teaching status, urbanicity, case mix index, and safety-net burden.

Performance metrics — readmissions, infections, patient satisfaction,
Medicare spending, and mortality — are scored within peer groups,
not against all hospitals nationally.

This ensures fair, like-for-like benchmarking across the U.S. hospital landscape.

Cluster Summary — Structural Profiles

One row per peer cluster. Structural variables only — performance is scored separately within each group.

Cluster	Hospitals	Avg Beds	Avg CMI	Safety Net	Teaching %	IPPS Covered
Mid-size urban community (non-teaching)	567	91	1.51	0.3%	19.2%	100.0%
Micropolitan community hospitals	916	163	1.64	0.3%	0.1%	100.0%
Small-town community hospitals	1143	356	1.91	0.4%	100.0%	100.0%
Large urban academic medical centers	133	46	1.23	0.3%	9.0%	92.5%
Rural community hospitals	148	52	1.36	0.3%	8.1%	99.3%
Urban safety-net hospitals	143	35	2.94	0.1%	6.3%	100.0%
Specialty metro hospitals	65	6	1.01	0.1%	1.5%	26.2%

Performance Summary — Avg Median Score by Cluster

Scores are within-cluster percentiles (0–100). 100 = best performer among peers.

Cluster	Avg Median Score
Small-town community hospitals	45.5
Micropolitan community hospitals	45.0
Mid-size urban community (non-teaching)	44.4
Rural community hospitals	42.8
Large urban academic medical centers	42.4
Specialty metro hospitals	40.5
Urban safety-net hospitals	40.2
